Program

The target of this conference is to discuss how to compose a book on war, occupation and economic development from the papers and notes given by the participants on a number of subjects. Therefore we need to discuss the subjects that will be the chapters of this book. Important points in every session therefore are:

1. How to make from the papers on countries or number of countries a chapter. Or, in other words: What is the general line of all papers
2. Are there important differences for instance between East and West or North and South and if so, are these differences a consequence of differences in the economic situation or, for instance the Nazi's racist policy.

3. Are there very developments in only one or some countries that, although not general for all Europe, are too important to ignore.
4. We propose a **presentation of each paper in only 10 minutes** and thereafter a discussion about the question what to make out of it for the chapter.

Apart from the chapters there must be discussions about:

1. What should be in the introduction and in the conclusion? How to go on?
2. How to arrange so that every author get the credits he/she earns for the work that is done, although the papers of the individual participants are used in the chapters and not individual recognisable anymore.
